To clarify the needs of your project, consult them with us at tech.support@halla.cz.

DALI luminaire with the possibility of connecting more DALI drivers with sensors

Luminaire functions

DALI with programmable buttons or touch panels and sensors

- presence / motion detection (PIR),
- maintaining a constant light level,
- possibility of push-button inputs / controls,
- selecting the appropriate mode: programmable mode / scene control / group control / programming mode / TunableWhite,
- different system behaviour in DALI-1 and DALI-2 mode.

DALI with connected sensor and easy setup

- control unit operating completely autonomously,
- preset functional profiles: *separate office*, *classroom*, *hallway*, *toilet* and *free-standing luminaire*,
- responds to daylight, movement and presence (up to 4 sensors in parallel) + special PIR settings (so-called *neighbourhood function*),
- two types of remote controls - controls - *user* (on / off / dim / automatic control) and *programming* (complex settings and control),
- option to turn off the power consumption of drivers in standby mode,
- can also be connected to a central DALI system,
- possibility to control the luminaires with up to two buttons with functions: ON / OFF / dim what could be used, for example, for separate regulation of direct and indirect components,
- two groups of luminaires up to 10 DALI ballasts per group.
